Skills Practice - Shell Scripting Exercise 3

Goal:

The goal of this skills practice is to familiarize you with shell scripting techniques.

Instructions:

Start a Virtual Machine

For this practice let's use a virtual machine that we created for the previous exercise. First, start a command line session. Change into your `linuxclass` folder and then change into the `scripting` directory. From there start the virtual machine and connect to it.

```
cd linuxclass
cd scripting
vagrant up
vagrant ssh
```

Write Your Script

Store the output of the command "hostname" in a variable. Display "This script is running on _____." where "_____" is the output of the "hostname" command. Name your script `script3.sh`.

Hint:
It's a best practice to use the `${VARIABLE}` syntax if there is text or characters that directly precede or follow the variable.
